

HOW TO PACK YOUR WOOLPACK

First you need to **assemble the carton**. Build it and seal the bottom, but don't close it just yet, all the food/contents still needs to go in!

Your Woolpack solution consists of **two interlocking liners** which cover all internal faces of the carton. The first liner should be placed across the base of the carton, up one end with an excess flap hanging over.

The second liner fits snugly around the sides of the carton, covering the two sides and remaining end. So now all internal walls of the carton are covered by the Woolpack liners!

now it's time to chill...

Place ice pack(s) at the bottom of the carton immediately on top of the Woolpack liner. For optimum performance, we recommend that you use a refrigerant with a bubble layer, and the bubble wrap side of the ice pack faces up!

Next, **fill up the carton** with your contents. It is important that you don't have too much spare space in the carton! Extra space degrades performance.

Place the remaining **refrigerant** on top of the food. This time we recommend placing the bubble wrap side facing down towards the contents. Placing the other side against delicate contents can lead to damage.

Finally, **cover the product** fitting the Woolpack snugly over the food. The more snug it is, the better your Woolpack will perform!

Close the lid of the carton, seal and you are good to go!
